

Environmental Policy

In Deigual we are aware of the impact that our activity generates on the environment. That is why we are committed to incorporate and apply sustainable development criteria throughout our supply chain to ensure efficient management of natural resources and adequate protection of the environment.

Our commitment is based on the following principles:

- Consider **environmental criteria** in our processes, projects and decisions.
- **Protect** the environment and **prevent** pollution through the **sustainable use** of resources, the reduction of emissions and waste generated in our offices, distribution centers and stores, in order to **reduce** the environmental impact of the activity
- **Reduce** the **carbon footprint** of our operations by influencing our entire supply chain.
- **Grow** in a **responsible way**, establishing and constantly analyzing quantitative and qualitative indicators that allow us to make a global measurement of the impact of our activity; from the design to the final life of the product.
- **Comply** with the **applicable legal** and **regulatory requirements** in environmental matters, as well as those established voluntarily.
- **Identify** the possible environmental **risks** derived from the activity, in order to prevent them, if applicable.
- To improve, it is essential to **innovate**. Whenever possible, we are committed to implementing new technologies, materials, and processes to reduce our impact.
- **Collaborate** and maintain an open dialogue with our main stakeholders in environmental matters, to continue improving in sustainability.
- **Continuous improvement** is our main objective, which entails reviewing and reinventing our objectives and processes periodically.
- Our commitment is **global**, active and daily, so we seek the involvement of everyone, from employees, suppliers, customers or consumers.

All together, making a better world.
